

Statistics information stored in dbc.Indexes.IndexStatistics and dbc.tvfields.FieldStatistics: Interval[0]

40 bytes for numeric data

56 bytes for nonnumeric data

- Minimum value within column
- Modal (most common) value within column
- Frequency for modal value
- Number of distinct values within column
- Number of rows within table

Followed by up to 100 (TD12: 200) “High-Biased” or “Equal-Height” intervals

40 bytes for numeric data

56 bytes for nonnumeric data

- Maximum value within the interval
- Modal value within the interval
- Frequency for modal value within the interval
- Number of distinct nonmodal values within the interval
- Number of rows for nonmodal values within the interval
